October 12, 2009

In October 2009, Engineering Support International (ESI) was awarded a contract to provide irrigation design and permitting support to Deseret Ranches of Saint Cloud, Florida. They are planning to improve the irrigation systems on over 3,000 acres of pasture. ESI teamed with Progressive Water Resources, LLC (PWR) out of Sarasota Florida, who will provide the permitting expertise. This strong combination of permitting expertise and agricultural irrigation design experience allowed the ESI/PWR team to win the contract.

Deseret Ranches has historically under-utilized their pastures and is planning a large effort to improve the seepage irrigation systems to effectively irrigate more acreage than they have in the past. They also are securing their water rights to make full use of the wells on the property.

The permitting and design efforts are planned to be completed within 4 months, with construction of the irrigation systems to occur over the following 2 years.

Engineering Support International, Inc. is an engineering firm that offers high quality, modern engineering services as well as providing offshore CAD, GIS, hydraulic modeling, engineering technician and engineering support to firms across the United States. The combination of our offices in the United States and Colombia allow US firms to take advantage of our offshore rates while ensuring that they get the level of service that they are accustomed to in the United States.
